

EXERCISE: AI AGENT EMAIL ASSISTANT

Trigger: A chat message is received asking to send an email to a specific customer by name.

Step 1: Set Up Customer Database in Google Sheets

Create a Google Sheet with customer data: Full Name, Email Address, and Phone Number.

Step 2: Configure AI Agent with Tools

Set up an AI Agent using OpenAI's model. Add Google Sheets and Gmail tools.

Step 3: Process Chat Message

The AI agent analyzes your message to identify the customer and email content.

Step 4: Fetch Customer Email Address

The AI agent searches the Google Sheet by name and retrieves the email address.

Step 5: Send Personalized Email

The AI agent composes and sends the email via Gmail using your content.
