

EXERCISE: AI DOCUMENT SUMMARIZER

Step 1 (Trigger): On Form Submission

Set up the workflow to start automatically whenever a form is submitted.

- The form should allow users to upload a PDF file.

Step 2: Extract Text from File

Use the Extract from File node to pull text from the uploaded PDF.

- This converts the PDF into plain text that can be processed further.

Step 3: AI Summary with Context

Send the extracted text to the Message Model node.

- Ask the model to generate a clear, concise summary of the document.
- Use the Wikipedia tool for extra context and related information when needed.

Step 4: Save to Google Sheets

Add a Google Sheets - Append Row node to store the processed information.

- Save the following details: Title, Summary, Date Added
