

EXERCISE: DATA BACKUP SYSTEM

1. Trigger: On Form Submission

Set up the workflow to start automatically whenever a new form is submitted.

Your form should collect: Full Name, Email Address, Position Applied For (choose from: Marketing Specialist, Project Manager, Data Analyst), Resume (File Upload)

2. OneDrive: Search Folder (Temporary Step)

Add a OneDrive node to search for the target folder by name.

- Copy the folder ID from the output.
- Once you retrieve the ID, you can remove this search step.

3. OneDrive: Upload File

Add a OneDrive node to upload the resume file from the form submission.

- Use the folder ID obtained from the search step.
- This saves each applicant's resume in the correct OneDrive folder.

EXERCISE: DATA BACKUP SYSTEM

4. Google Sheets: Append Row

Add a Google Sheets node to append the applicant's data to your sheet.

- Include the following fields: Full Name, Email, Position Applied For, File URL.
